|               | <b><u>Learning</u></b>                   |
| Maximum Marks | 10 Marks                                 |

### **Model Optimization and Tuning Phase**

The Model Optimization and Tuning Phase involves refining machine learning models for peak performance. It includes optimized model code, fine-tuning hyperparameters, comparing performance metrics, and justifying the final model selection for enhanced predictive accuracy and efficiency.

#### **Hyperparameter Tuning Documentation (6 Marks):**

| Tuned Hyperparameters | Optimal Values |
|-----------------------|----------------|
| -                     | -              |
|                       | -              |
|                       |                |
|                       |                |

#### **Performance Metrics Comparison Report (2 Marks):**

| Model               | Baseline Metric | Optimized Metric |
|---------------------|-----------------|------------------|
| Random Forest       | Baseline value  | Optimized value  |
| Decision Tree       | -               | -                |
| Logistic Regression | -               | -                |

# **Final Model Selection Justification (2 Marks):**

| Final Model   | Reasoning   |
|---------------|---|
|               | The Random Forest model was selected for its superior performance,          |
|               | exhibiting high accuracy during accuracy. Its ability to handle complex     |
|               | relationships, minimize overfitting, and optimize predictive accuracy       |
| Random Forest | aligns with project objectives, justifying its selection as the final model |
